

Save Money With eDelivery

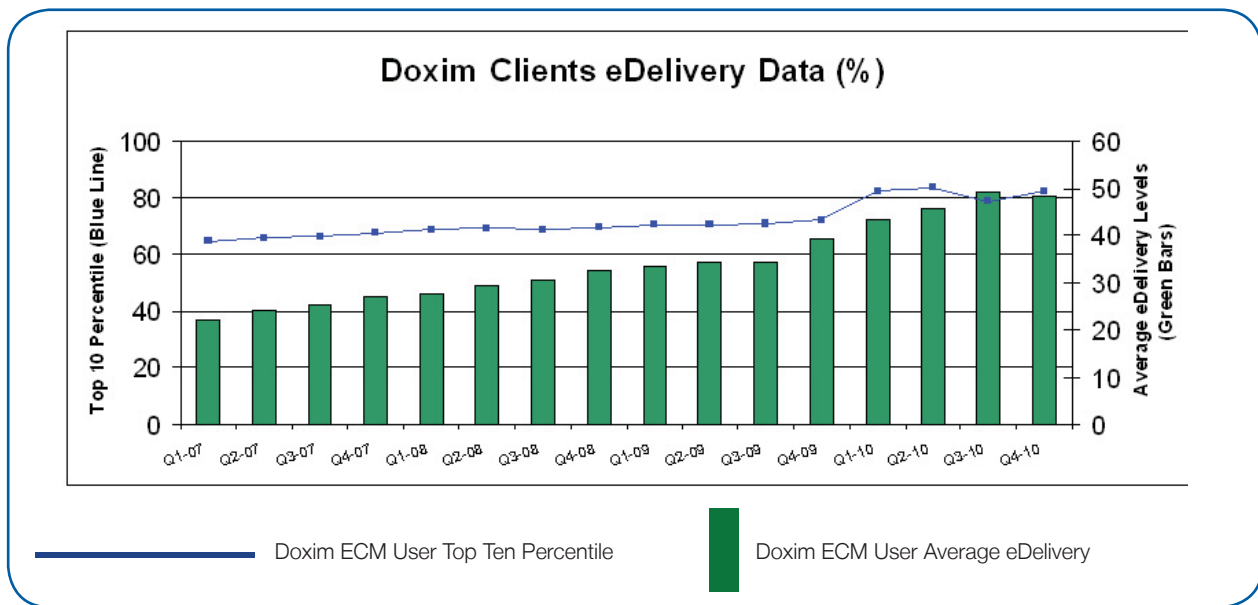

Doxim customers have consistently achieved better eDelivery levels for online statements than the industry average.

Why? Because, unlike other statement processing service providers, Doxim is 100% committed to helping its customers reduce the volume of statements that they print and mail.

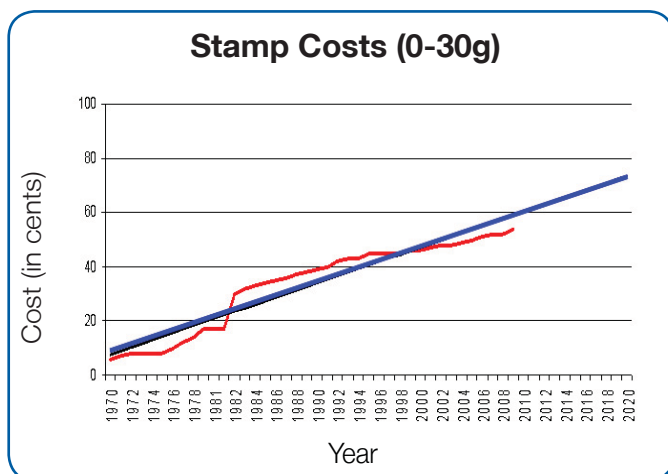

The graph below says it all. Average eDelivery volumes across the Doxim customer base is now well over 40%, with the top ten percentile of customers achieving over 70% print suppression. Some customers are even closing in on 95% eDelivery rates.

Just imagine how much you could be saving at 40%, 60% or even 80% eStatement delivery levels.

Reducing the volume of printed statements is good for the environment, meets customer demands for more eco-friendly services and, best of all, saves you money. In fact, once you achieve around 20% e-Delivery, a Doxim eStatement solution pays for itself. Beyond this it actually starts to save you money.

Postage Rates Are Trending Upwards

Postage charges represent the most significant part of the overall cost you incur to mail a statement. The graph below shows the projected increase in annual postage over a 50 year period and how postage rates have closely tracked this projection from 1970 to today's date.

These rates are projected to rise an additional 35% over the next 5-10 years, making mailing statements more costly than ever. That's why Doxim works so closely with its customers to help implement programs that successfully reduce the costs associated with printing and mailing statements.
